PCB Pads & Markings
1:1

NOTES:

1. Base is FR-4 laminate with 2 oz copper, white solder mask and black markings.
2. Bottom of the FR-4 base is ENIG and electrically neutral.
3. Solder pads are ENIG plated.
4. The LED module must be mounted to a suitable heat sink with a thermally conductive interface material such as our pre-cut thermal adhesive tape. (Part LXT-SR02-3)
5. Thermally conductive double sided tape or epoxy is recommended for fastening the LED module to the cooling surface. Mechanical fasteners are not recommended. See the datasheet for additional details.
6. The module can be configured for series operation by applying solder dots between series configuration pads J1 to J6. See the datasheet for additional details.
7. T1 is a Vishay NTC 10K thermistor suitable for monitoring temperature and foldback control.
8. See the datasheet for instructions for determining LED junction temperature.
9. Perimeter solder pad locations are relative from the center of the module to the center of the solder pad.
10. Holes sized and positioned to accommodate the Khatod PL121 series of secondary optics.
11. Holes sized and positioned to accommodate the Polymer 7 Cell Cluster optics.

Solder Pad Locations (Note 9)
